The Use of Colloidal Activated Carbon to Address PFAS

Ryan Moore, CHMM
Senior Technical Manager/PFAS
Program Manager

Agenda

REGENESIS[®]

©2020 All rights reserved. REGENESIS and PlumeStop are trademarks of REGENESIS Bioremediation Products. This content may not be reproduced, broadcast, published or retransmitted without the prior written permission of the copyright holder.

- Colloidal Activated Carbon
- Strategy using colloidal activated carbon
- Considerations for using colloidal activated carbon
- Field case study

PFAS: The Challenges

- Large & dilute plumes
- Low target concentrations
- Limited in our tools
 - Pump and treat w/ GAC or IX

REGENESIS[®]

- Size: 1 – 2 μm
 - 2-3 OOM smaller than GAC (500-1,000 μm)
 - Size of a red blood cell
 - Suspended as a colloid in water/polymer
 - Distributes widely at low pressure
 - Extremely fast sorption
 - Converts polluted aquifer into purifying filter

Treatment of Flux Zones and Control of Back Diffusion

CAC: Modes of Action

REGENESIS®

©2020 All rights reserved. REGENESIS and PlumeStop are trademarks of REGENESIS Bioremediation Products. This content may not be reproduced, broadcast, published or retransmitted without the prior written permission of the copyright holder.

- Mode of Action with PFAS:
 - **Dynamic adsorption**
 - Not a permanent immobilization
 - **Effect: Increases the retardation of a PFAS plume**
 - Natural retardation factors for PFAS: 3-20
 - Retardation factors achievable with CAC: 10,000
 - Containment for decades
 - PlumeForce Modeling™
 - Third Party Modeling (scientific articles available)

Longevity-Third Party Review

- University of Waterloo, Waterloo, Ontario, Canada
- University of Toronto, Toronto, Ontario, Canada
- Longevity Conclusions:
 - Increased by CAC concentration injected
 - Length of treatment area
- Drowater Solutions, Ottawa, Ontario Canada
- In Situ Remediation Services Ltd., St. George, Ontario, Canada

REGENESIS®

Why Colloidal Activated Carbon?

REGENESIS[®]

©2020 All rights reserved. REGENESIS and PlumeStop are trademarks of REGENESIS Bioremediation Products. This content may not be reproduced, broadcast, published or retransmitted without the prior written permission of the copyright holder.

- Limited destructive options
- Low Cost
 - No O&M costs or generated waste
 - Reapplication only after years/decades
- Localized containment/concentration of PFAS
 - Pair with future destructive technologies?
- *In Situ* Sequestration
 - Preventing contaminant migration
 - Removes exposure → removes the immediate risk

Considerations for using Colloidal Activated Carbon

REGENESIS®

©2020 All rights reserved. REGENESIS and PlumeStop are trademarks of REGENESIS Bioremediation Products. This content may not be reproduced, broadcast, published or retransmitted without the prior written permission of the copyright holder.

- Identity of the target contaminants of concern
 - Longer chain PFAS > shorter chain PFAS
- Contaminant Flux
 - Groundwater velocity
 - Contaminant concentrations
- Presence of other non-target compounds
 - Compete for sorption sites (carbon demand)
- Application
 - Design Verification Testing
 - “Building an underground fence”

Site Location: Camp Grayling Joint Maneuver Training Center

- Founded 1913
- 147,000 acres
- Largest National Guard training center in the country
- Home to the Grayling Army Airfield (900acres)

Contaminant Release History:

- Diesel, PCE/TCE, PFAS

Remediation History:

- Pump and Treat, air sparging/SVE

Case Study: Pilot Test

REGENESIS®

Aquifer:

- Sand & Gravel with some clay layers
- ~250'/yr gw seepage velocity
- Treatment Interval 15-27' bgs

Contaminant levels:

- 10 µg/L PCE
- 130 ng/L Total PFAS (PFOS, PFHxS)

Sensitive Receptors:

- Residential areas
- Surface water bodies
- Property Boundary

Former Bulk Storage Tanks Location

PlumeForce

- Long-Term Prediction Model
- Competitive Sorption and Degradation (if applicable)
- Compound Specific Isotherms
- VOCs, PFAS, etc.

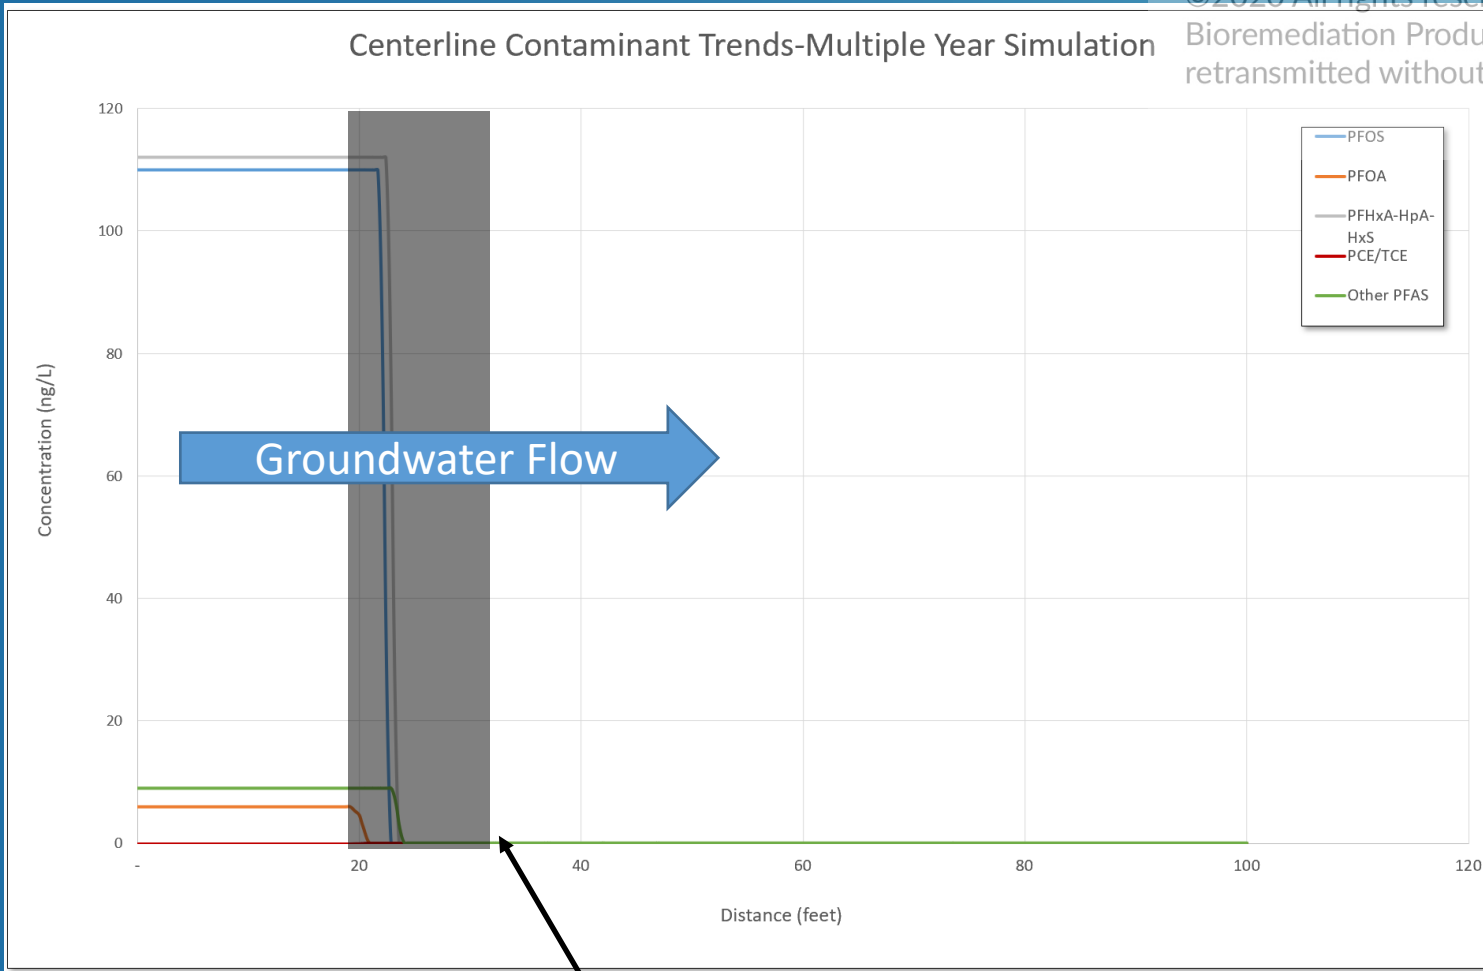

Considerations

- Soil Type/Porosity
- Groundwater Seepage Velocity/Mass Flux
- Vertical Variations
- Barrier Thickness
- Carbon Demand
- Time

Modeling in the Design Process

- Inputs**
- GW 219 feet/year
 - Infinite Source
 - PFOS 110 ng/L
 - PFOA 8 ng/L
 - PFHxA -HpA - HxS 112 ng/L
 - Other PFAS 9 ng/L
 - PCE 10 ug/L
 - No degradation of any PFAS compound or CVOC's
 - Time (>75yrs)

Average Total PCE in Monitoring Wells Upgradient and Downgradient of PlumeStop Barrier

REGENESIS®

Summary

- **Very Successful Test**
 - **Verified distribution of CAC**
 - **Sustained reductions of PFAS and PCE over time**
 - **Anticipated to last for decades**
 - **Low cost alternative for possible remediation**
- **CAC provides a flexible, effective, *in situ* option to address PFAS**
 - **Passive plume control & containment**
 - **Prevent expansion of the problem**
 - **Manages the risk of PFAS in groundwater for years**
